

WOODTM
VISION
MIDDLE EAST

Wood Vision™ is the latest revolutionary real wood product. This unique light transmitting pure wood veneer is patented and founded by our company. When the background surface is lit, the grain, character and structure of the wood comes to life. With this technology, we are able to incorporate this into various wood types. Visual appearance is unparalleled as the wood grain and growth rings are highlighted and accentuated. Further modifications can be made to the Wood Vision™ product via the addition of colourings and varnishing to increase the luminosity of the product. Mixing this new technology onto the most basic of building materials instantly changes a dull environment into a space that emphasizes on nature and its beauty. Wood Vision™ veneered surfaces will be at the forefront to change the indoor environment or low light enclosures by blending the perfect balance of nature and ambience.

DAY

NIGHT

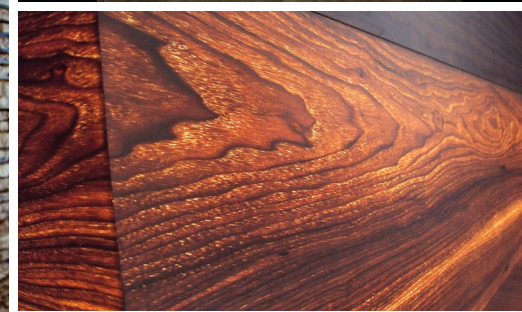

Wood Vision™ can be used in a variety of ways, traditional wooden products such as flooring, ceilings and feature walls. Other uses include creating furniture or ornaments that can decorate the environment. The quality of this product is guaranteed by the warranty offered. With this technology, the capability of the product applications are endless and are only limited to the imagination. It creates a new concept of ambience, and bond between the natural environment and living spaces.

Wood Vison™ is a panelled veneer surface that has been developed on a transparent clear material. The veneer and acryl are bonded by an adhesive specially developed for this technology to allow light to transmit through the solid background surface of the wooden panel. When lit, the back of the veneer structure highlights the beautiful and natural patterns of the wooden surface. A variety of design options are available, examples include allowing both sides of the veneer to be

altered to present information such as signs on the veneer or unique designs via the means of CNC - milling, and/or LASER - engraving. Depending on the background lighting conditions in the room, the light transmitting veneered surfaces displays variable lumen intensity to your liking. Further examples include illuminating the whole surface of the Wood Vision™ panel. Wood Vision™ transforms ordinary veneer radically by allow the beautiful and natural motifs on the surface to be seen.
